MAJD
CARTONPLAST

Choosing professionals from a long time ago

Majd Baspar-e Kavir-e Qom company has been established in November 2002 as a CJSC company and started its activities at the same time.

The facilities of the Co., are: production saloons in 3000 sqm, office building in 170sqm and guardhouse in 60sqm. There are production halls, hall for printing processes and buildings for laboratory and office.

The company has changed its name to "carton plsat majd-e Qom" in 2005.

About us

According to its statute, the most important aim of the "carton plast-e majd-e Qome" company, is producing and offering rolls, sheets and boxes with an acceptable and competitive quality in the market in order of increasing customer satisfaction.

Trying to keep its share in the market, the company also tries to make all kinds of products which meet the needs of all groups in the society, thereupon it can expand its presence in domestic and international markets and actualize its innovative ideas through attaining appropriate benefits.

Carton plsat-e majd-e Qom company is one of the credible and leading companies in the country and by having exclusive producing lines for roll, sheet and carton plast box, has a good situation among its rivals.

Because of implementing international standards, the company succeeded to achieve international certificates: ISO 14001 in 2004, ISO 10002 in 2004, OHSAS18001 in 2007 and ISO 9001 in 2008.

MAJD CARTONPLAST IN ADVERTISING

The advantage of using kinds of carton plast stands in advertising, is lower cost than the other media: yet they will interact with more audiences in a longer period of time and cover a wide geographical zone compared with the same number of the other media.

The advantage of using carton plast in advertising stands:

- ✓ 100 percent recyclable and environmentally friendly.
- ✓ Easy transporting and quick assembling.
- ✓ High resistance.
- ✓ Printable in high quality and in various designs and colors.

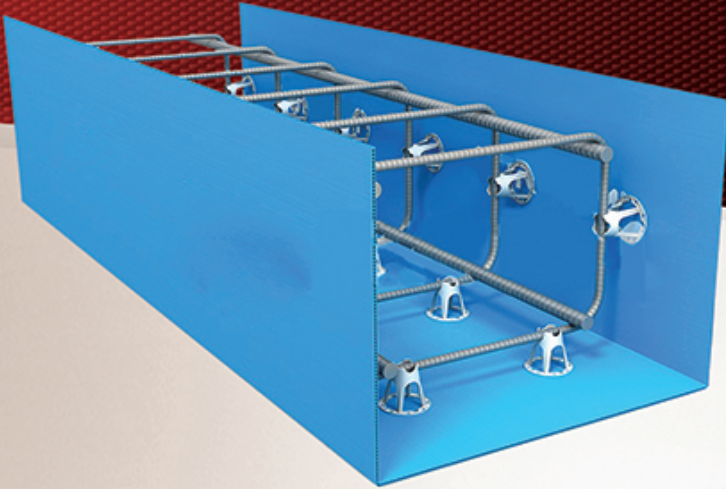

The experienced designers of this company could provide extraordinary designs for advertising stands at the point of purchase which could introduce the stands of carton plast to the market as the most expressive and the most cost-effective advertising medium for POP advertising.

Carton plast

in the construction industry

Using carton plast in the construction industry has been increased so much and because of the vast use in this field, is one of the cost-effective choices for performers.

Among the advantages of using carton plast in the construction industry, we can point to:

1. Easy performance
2. Not absorbing of concrete humidity
3. Acid and base resistant
4. Lightness and various colors

Carton plast usage in the construction industry:

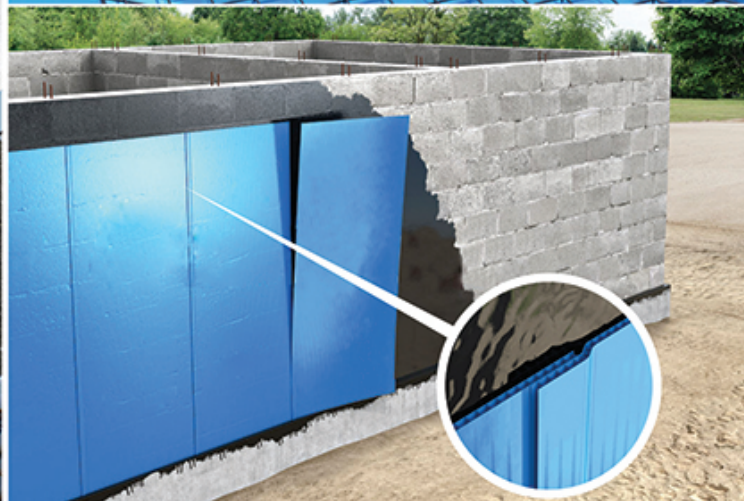

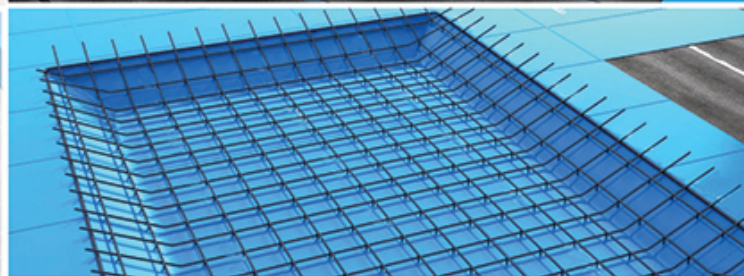

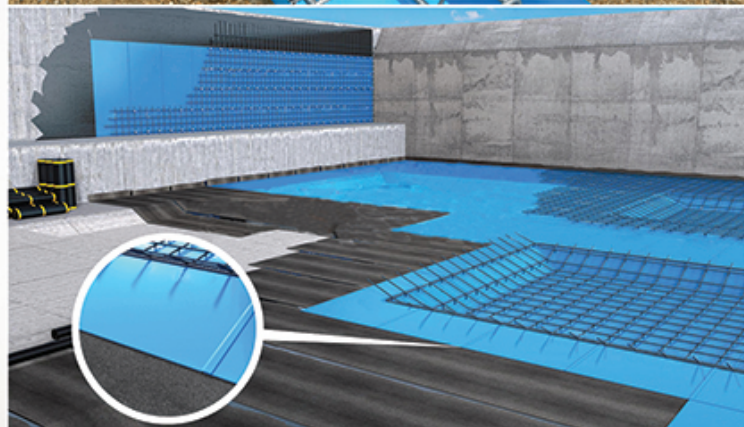

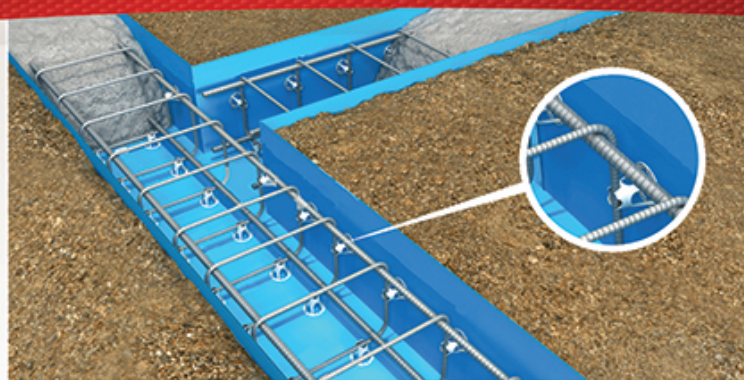

1. Sound insulation
2. Humidity insulation
3. Frame for pouring concrete foundation
4. Partition wall building
5. Fencing and safeguarding
6. False ceiling
7. Decorating and formatting

CARTON PLAST IN THE CONSTRUCTION INDUSTRY

The advantages of formatting by carton plast:

1. The possibility of cutting by cutter blade to custom shapes
2. The surface of the mold, shiny and smooth
3. Nonstick surface against concrete
4. Resistance against chemical materials like acid and base
5. Enhancing the rigidity of concrete by keeping its humidity and not absorbing it
6. Bringing out the molds easily
7. The capability of reusing used sheets
8. Simultaneous accomplishing of piers and beam because of the lightness of the molds, so it will save materials and human resources
9. The possibility of constructing light and safe structures against earthquakes

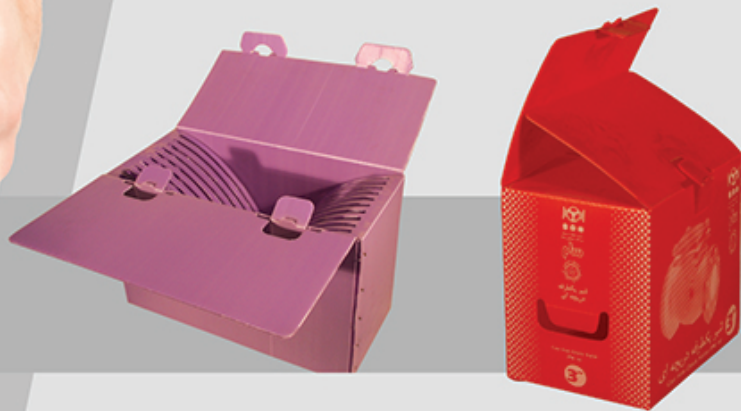

Carton plast in packaging

The proper resistance of carton plast products against humidity, temperature, shock and chemical materials combined with cosmetic appearance makes them among the best choices for box making and packaging the food and pharmaceutical materials and products.

Packaging in carton plast protects the contents against water and humidity while the paper cartons will be damaged and can be harmful for the contents likewise.

Carton plast boxes resist against shock and pressure while the paper made cartons will be ripped and damaged by shock and pressure.

Other special advantages

of packaging in carton plast made boxes:

Lightweight.

Acids, chemical materials, detergents, grease, lubricants and oils do not affect them.

Resist against temperature fluctuations from -40c to +80 degrees Celsius.

Recyclable hundred percent.

Delay combustion and prevent reaction between UV materials.

Sheets containing UV stabilizers are resistant against sunlight.

Protect ESD

(electrostatic conductive)

Printing on carton plast boxes resist against water and sunlight while the printing on paper made boxes are vulnerable against water and sunlight.

Carton plast boxes

will be able to be reused several times while the paper made cartons can be used only once.

Carton plast

in agriculture:

Among the cases of using carton plast in agriculture, we point to the following items:

- Spaling protector
- Flower bed
- Vase
- Water channel
- Greenhouse
- Fruit box

Carton plast in agriculture as the spaling protector

Pipelines made of poly propylene protect the spaling and later the tree.

Usage and advantages:

- Protecting spaling for better growth against repair and maintenance, machinery, Herbicide spray, wind and heat.
- Well-being of the roots due to internal environment of the shelter.
- A 30 percent decrease weed management's costs.
- Proper growth from the cultivate moment.
- Increasing the life of trees.
- Life-length of a shelter differs due to site and climate, but as usual, it will be from 5 to 7 years.

Specifications

- Steady light dissemination without burning or shadow.
- Protecting plants in the hardest climatic conditions.
- Installation both horizontally and vertically for decreasing waste and losses.
- Easy flexibility and incline even at the highest point.
- Adequate with all lightweight greenhouses.
- Easy set up and use screws in overlap points.
- Easy washing and disinfecting of the covers.
- The lack of mold and moss growth.

Carto plast usage in greenhouses:

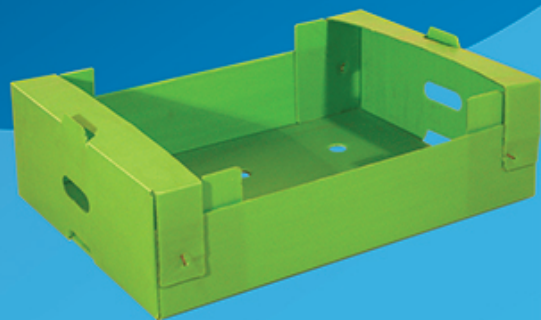

Some advantages of using carton plast in greenhouses are:

Saving time and money:

- When the farmers and producers choose carton plast for covering their new build greenhouse or the one already built, they know that they will save money and enjoy a happy ending.
- Carton plast coverage of greenhouse decreases heating costs, likewise the plant grows faster.
- Higher benefit in coverage with high density polyethylene and free maintenance and repair.

Carton plast in agriculture as vase:

- Carton plast sheets are anti- sect and water proof.
- Making vase of this stuff is an innovative idea.
- These vases can be used in ceremonies and inaugurations and even in the garden.
- They are cost- effective too.

Carton plast

in industrial
production buildings:

CARTON PLAST IN INDUSTRIAL PRODUCTION BUILDINGS

Among the most important advantages of using carton plast in the industrial production building we can point to following cases:

The best and the most cost-effective product for making false ceiling and false wall in the internal parts of the industrial buildings.

The best alternative for net cages in poultry farming.

Sound, heat and electrical insulation.

Various and required colors (saving the painting costs)

Resistant against humidity, mold, rust and growth of all kinds of bacteria.

Resistant against temperature fluctuation from -40 to +80 degrees Celsius.

Resistant against birds, especially sparrow.

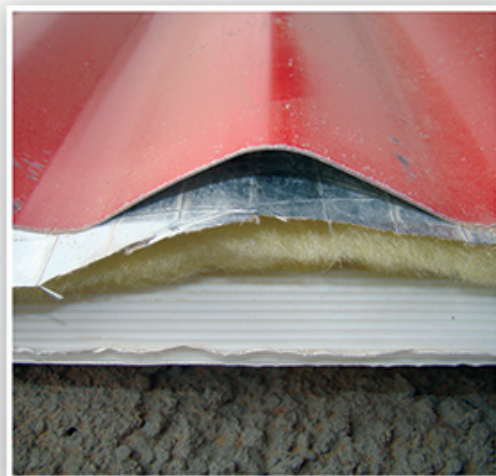

Resistant against acid and base.

Economical and cost effective.

Confirmed by health issues officials.

Quick installation.

Nonflammable.

Carton plast

in home appliances:

% 60

Reduce energy
consumption

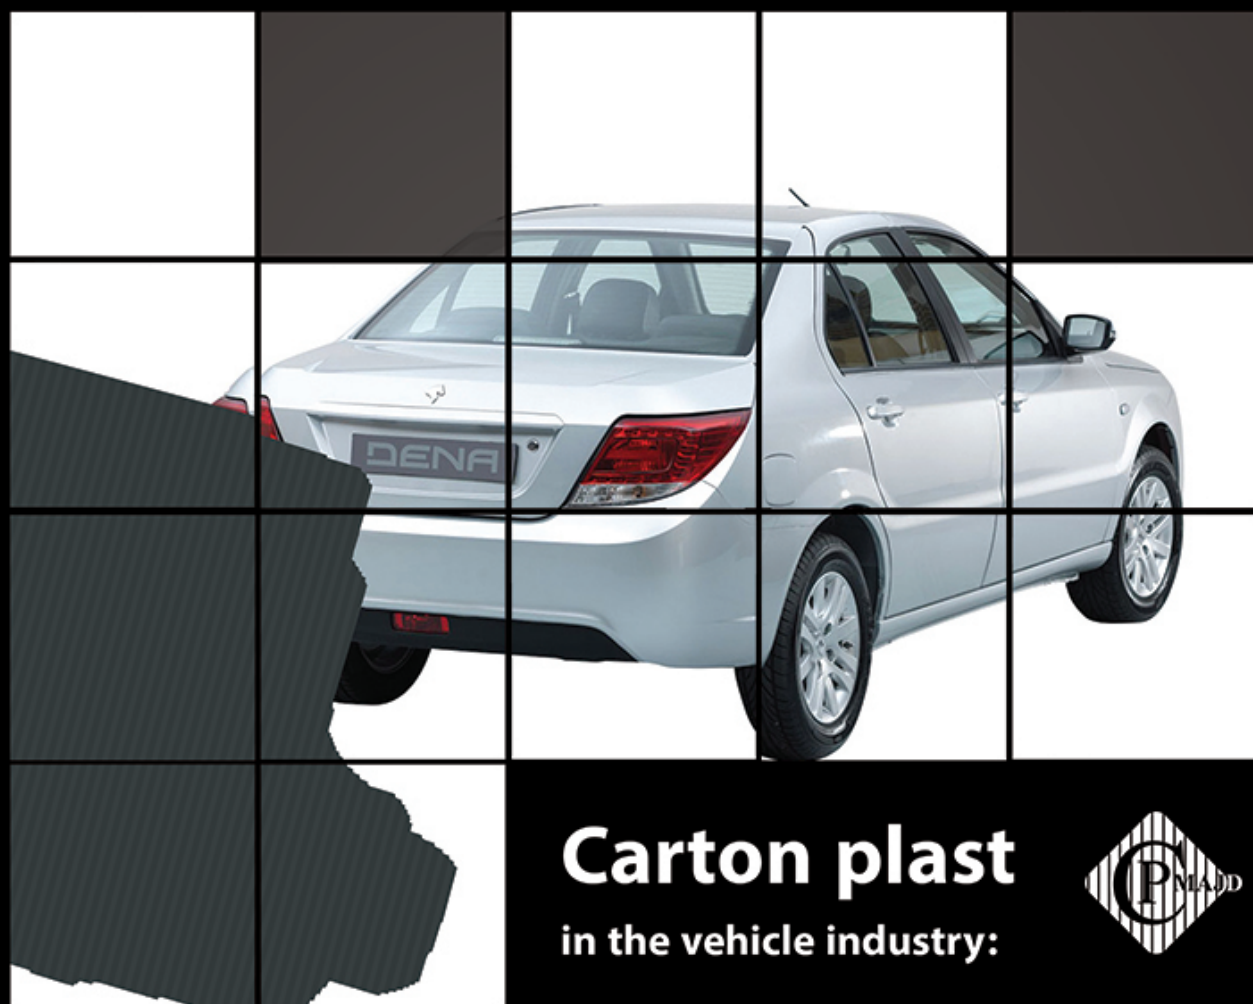

Some cases of using carton plast in home appliances are as follow:

- As protector of all kinds of gas stoves.
- As protector of all kinds of water coolers.
- Using as a floor for refrigerators and freezers.
- Using as back protection of refrigerators and freezers.
- As protector of all kinds of refrigerators and freezers for preserving coldness and saving energy.
- Packaging home appliances.
- Lightweight and flexible compared with galvanized sheets.
- Sound insulation.

CARTON PLAST IN HOME APPLIANCES

Carton plast in the vehicle industry:

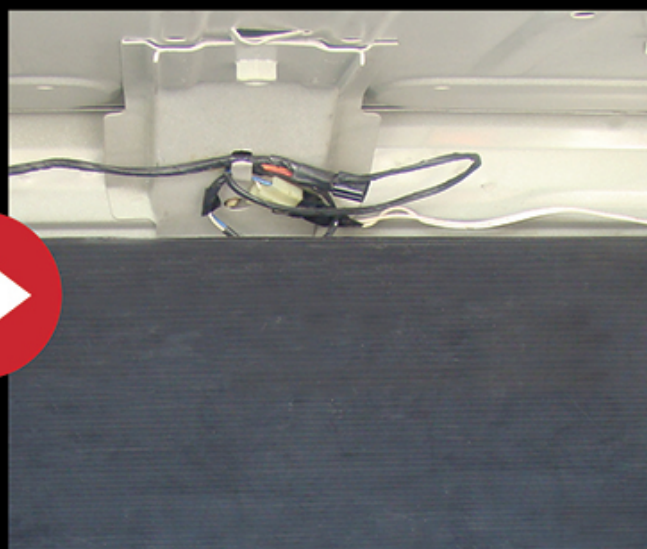

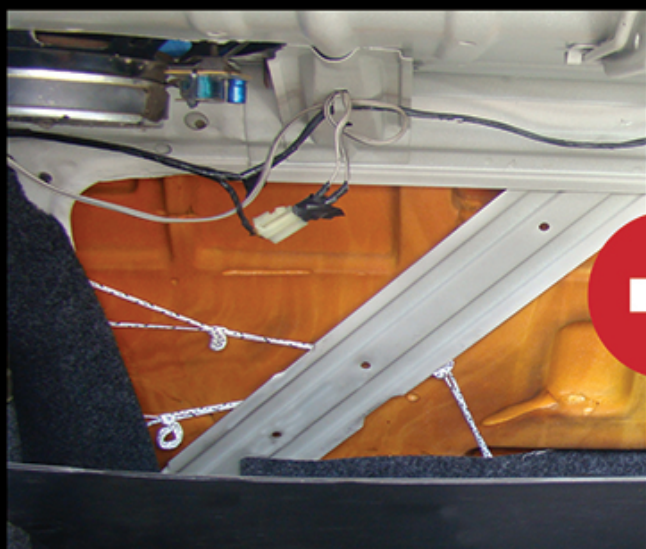

Advantages of using carton plast in vehicle industry are:

We can point to the following cases of using carton plast in the vehicle industry:

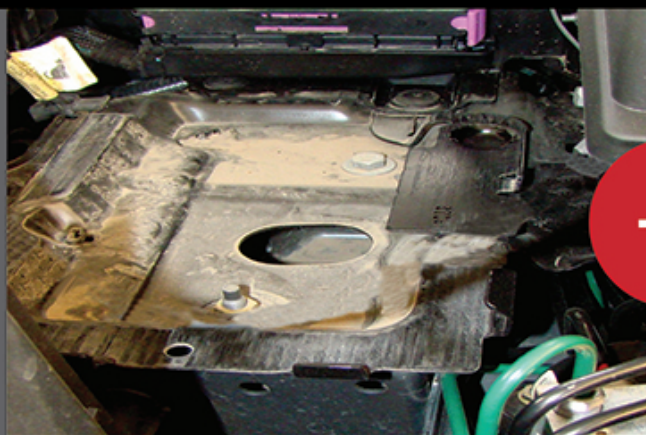

- Trunk flooring.
- Battery flooring.
- Trunk / cabin divider.
- Car seat.
- Hull sound insulation.

Lightweight meanwhile hard and firm.

- Reducing costs.
- Extraordinary efficiency.
- Electrostatic conductivity.
- Anti-corrosion and anti-erosion.

Carton plast

in recycling industry:

Recycling industry nowadays has gained increasing importance in protecting the environment and human health. In our country the recycling industry is at its first steps and recently there are some efforts for recycling and reproducing various products and one of the most important of them is the paper recycling.

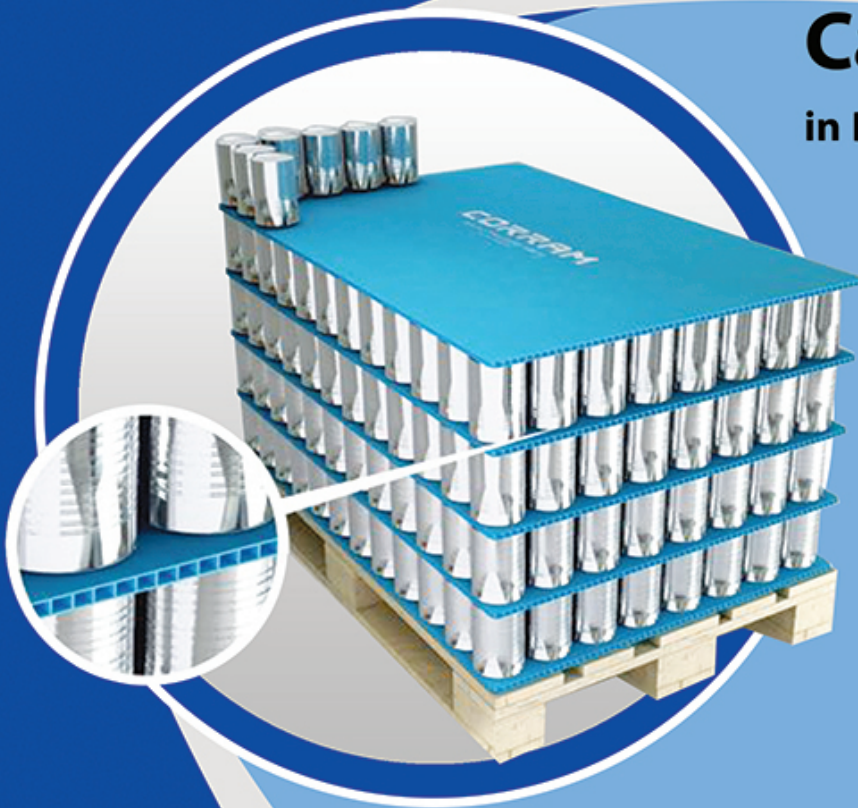

Due to the limitation of forest resources and trees in our country, paper recycling plays a vital role in preserving and protecting natural resources. Producing one ton of paper requires 17 trees, so if every person collects his waste papers, it equals one and half trees, and if all Iranians do so, it means not cutting 100 millions of trees.

Thus, paper recycling, addition to economic interests, will cause independence in pulp imports, reducing pollution, preventing tree cutting and helping systems for collecting and discarding rubbish. Carton plast-e Majd is proud for cooperation in this national purpose by producing recycle bins in various designs and dimensions for paper recycling.

Carton plast

in Depot and division:

Separating sheets (depot):

This type of sheet is designed and produced to protect and stabilize the contents of beverages or any special type of goods during transportation or even storage (depot). The separating sheet in the R&D unit is designed so that it can be used multiple times, which helps to significantly reduce costs. This type of sheet is usually produced in the following sizes.

1000 × 1100 950 × 1150
900 × 1500 1400 × 800

Characteristics of this type of sheets:

- 1 - Washable
- 2 - Round corners and smooth surface
- 3- Resistant to moisture unlike its counterpart (cellulose carton)
- 4 - Antibacterial ability
- 5 - Reduce costs
- 6 - 100% recyclable
- 7 - Resistant to all chemicals, including acids and bases

Carton plast

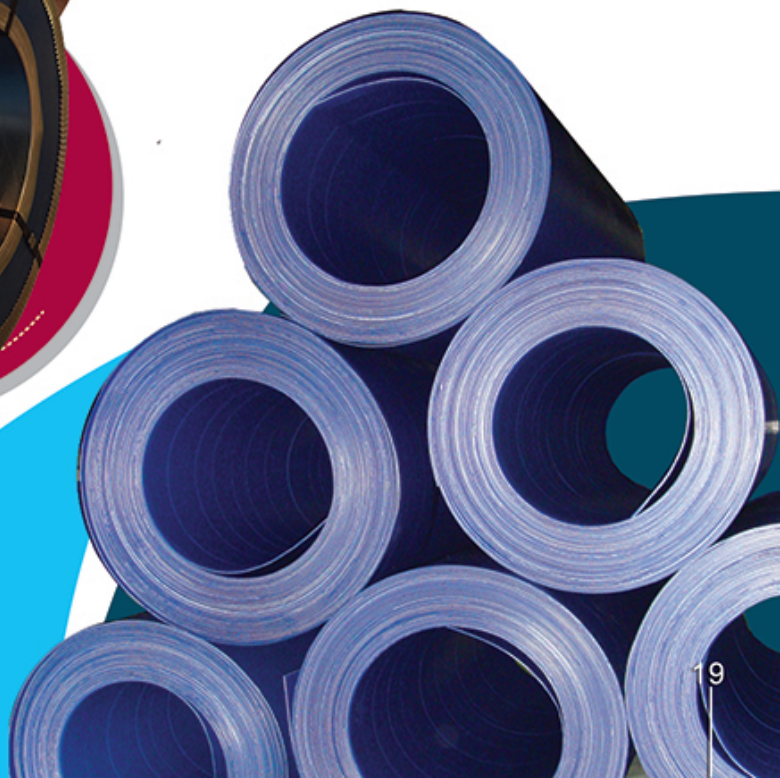

in Sheet and roll sheet:

A roll sheet of carton plast is produced from polypropylene polymer in a continuous process.

It is made of two flat sheets connected to each other by vertical plates.

Physical durability and chemical resistance of polypropylene polymer, made it ideal for a broad spectrum of purposes.

Specifications are as follows:

- Shock resistant.
- Easy to cut.
- Easy to install.
- Humidity resistant.
- Strong and durable.
- Electricity insulator.
- Lightweight.
- Hygienic.
- Odorless
- Nontoxic
- Flexible
- Resistant against a broad spectrum of chemicals including acid and base.
- Anti- decay.
- Anti-mold, antifungal, anti-stain.
- 100percent recyclable.

The unique specifications of the sheet of carton plast, make it be used in different industries, in the sensitive and strategic points:

- Produced sheet with conductivity property (electrostatic conductive)
- Produced sheet with anti-static property (reducing dust particle absorption)
- Produced sheet with anti-bacterial property (completely disinfectant)
- Produced sheet with the slow-burning property (non-flaming)
- Produced sheet with sunlight resistance property (more lasting outdoors)

Carton plast in Boards and signals:

Traffic boards are made of different materials and in different shapes, but recently there are boards and signs made of carton plast sheets in 3 to 5 or 6 mm thickness.

You can print on the surface of these sheets by colors contain UV which can resist against direct sunlight and tough weather conditions. They also resist against solvents and other chemicals. These sheets are a proper alternative to heavy galvanized or even aluminium sheets, also reflective sheets made in the US, Japan, Korea and China.

It is clear that in an industrial site, the safety of the labors and also the visitors, is the responsibility of the employer.

Security warning boards and signs, are the cheapest and simplest way for preventing dangers in many places.

Traffic boards are used in highways, roads and streets determine legal obligations and traffic rules, also to notice probable dangers.

In major industries it is not possible to introduce hazards without safety signs: Major industries have wide environments and there are many hazards also. In these environments, it is almost impossible for all workers to get familiar with all the dangers in different places and avoid them. In the other hand, some workers may be transferred from a section to the other and have no enough time to get familiar with probable hazards. By installing safety signs in a work environment, you can introduce the dangers to them. It is recommended, that health and safety officials identify unsafe and dangerous conditions and install safety signs at the proper points. Traffic boards and signs are as follows: The traffic boards and signs for safety help and road determiner. The traffic boards and signs for points and places. Traffic signs for driving safety.

Specifications:

- Light .
- Water resistant.
- Shock resistant.
- Strong.
- Environment friendly.
- Recyclable.
- Easy to transport.
- Different dimensions according to requirement.

Competitive Advantages:

These kind of sheets due to their low costs compared with galvanized and aluminium sheets, are ideal for long term purposes, as they are so for only few day's plans. These sheets can be used in demonstrations and election campaign.
